Thank you for downloading the demo of

"220V" - 200 Sequences for LittleOne v3

Following the world's "push-and-play" craze for EDM here is a set of **220 Versatile** melody presets in 5 categories::

- * 27 HARSH TUBE SEQUENCES,
- * 113 INSPIRING BASS SEQUENCES,
- * 22 ORIGINAL LUSH SEQUENCES,
- * 45 UNIQUE SIMPLE SEQUENCES,
- * 27 CALM AND GENTLE SQUENCES.

The pack introduces an impressive number of electrifying sequences to make a great melody line, punchy bass flow, aggressive 'Tube' sequences, leading dance motives or even ambient backgrounds. The majority of the lines can help you build your composition on the fly within their first 6/8 steps - the rest of the sequence can be a fine chorus or bridge filling. Everything carefully thought through presents LittleOne's core at its best. The pack also shows the analog heart of the beast in seemingly uncountable LFO routed presets. **Every single preset has Filter Velocity applied and Legato** gives you the perfect key change flow. On top of that, **a unique ModWheel configuration is going to make you play with a single patch losing track of time.** Of course all the sequences can be used in a simple patch mode (no SEQ) which within the whole content of the bank gives you amazing extra 220 varied presets to rely on.

INSTALLATION: Paste the folder "Daniel Stawczyk's 220V Free Demo Presets" into "LittleOne/Presets" directory. Presets of "220V" to be loaded **ONLY** via "LOAD" button of the instrument.
